Dissection **(Petromyzon)**

Some individuals start hematophagous feeding in the river before migrating to the sea, where sea lampreys prey on a wide variety of fish. The lamprey uses its suction cup-like mouth to attach itself to the skin of a fish and rasps away tissue with its sharp, probing tongue and keratinized teeth.

Read Free Sea Lamprey Dissection **Wikipedia**

Special set of muscles operate the buccal funnel and tongue apparatus. Lampreys can attach with the body of other fishes by producing a vacuum cup inside the buccal funnel. The vacuum cup is produced inside the oral cavity by the pulling on the tongue backwards by the contraction of the cardio-apicalis muscle.
