methods encompasses those approaches that attempt to directly assign structure factor phases using the intensities of the reflections. Such approaches are rigorous mathematical solutions of the crystallographic phase problem. Early work in the area (albeit for X-ray diffraction) used Schwartz's inequality to relate the phase of a specific reflection g to

Perturbation theory comprises mathematical methods for finding an approximate solution to a problem, by starting from the exact solution of a related, simpler problem. A critical feature of the technique is a middle step that breaks the problem into "solvable" and "perturbation" parts. [1]
