Coordination complexes have been known since the beginning of modern chemistry. Early well-known coordination complexes include dyes such as Prussian blue. Their properties were first well understood in the late 1800s, following the 1869 work of Christian Wilhelm Blomstrand. Blomstrand developed what has come to be known as the complex ion chain theory.

In chemistry, an atom cluster (or simply cluster) is an ensemble of bound atoms or molecules that is intermediate in size between a simple molecule and a nanoparticle; that is, up to a few nanometers (nm) in diameter. The term microcluster may be used for ensembles with up to couple dozen atoms.. Clusters with a definite number and type of atoms in a specific arrangement are often considered a ...

La chimie minérale, aussi appelée chimie inorganique (par traduction littérale de l'anglais), est la branche la plus ancienne de la chimie [1]. Elle comporte l'étude des divers corps simples existant dans la nature ou obtenus artificiellement et celle des composés qu'ils engendrent en réagissant les uns sur les autres, à l'exception des combinaisons avec le carbone qui sont étudiées à ...

Det periodiske system er en tabelarrangering af grundstofferne, ordnet efter deres atomnumre (antal protoner), elektronkonfigurationer og gennemgående kemiske egenskaber. Denne ordning viser periodiske tendenser, såsom grundstoffer med lignende opførsel i samme søjle. Det viser også fire rektangulære blokke med omtrentligt ens kemiske egenskaber. . Generelt gælder det indenfor enhver ...
